## February 2025 report

## **General Market Trends:**

- BoE cuts key interes rate by 25 to 4.50% (6 feb)
- Trump continues making a lot of panic especially regarding tariffs and Ukraine
- European government bonds were under pressure due to the expected increase in military expenses.
   Bund ASW trading clearly though 0 (Bunds underperforming)
- Risk indicators as iTraxx 5y Senior Financials 58 (60), 5y Crossover 289 (288) and VIX index 20 (16) has been remarkable stable at historically low levels
- US Equities struggled with Nasdaq, S&P and Dow Jones down 4%, 2% and 2%, respectively, while European stock again outperformed US having a good month with Euro Stoxx 600 and 50 being up 3%
- Rates were down. Euro 2y and 10 swaps were down 13 and 7 bp respectively while US swaps were down
  a stunning 23 and 31 bp for 2y and 10y swaps respectively. I.e. 2-10 5 bp steeper in EUR while 8 bp flatter
  in US

## Denmark:

- Callable bonds handled the chaotic political situation well. 0.5% coupon bonds lost 2bp while 3% bonds gained 1bp vs swaps and performed 4-6 bp better vs government bonds
- Fixed rate bullets and floaters had a quiet month with marginal performance vs swap of 1bp but up to 7bp vs government bonds
- Danish swaps underperformed about 1bp vs EUR while Danish government bonds lost 5bp vs German government bond in the 5y and 10y area

## Sweden and Norway:

- Swedish CPI came in surprisingly high (Ex energy yoy 2.7, exp 2.1% (6 feb)), in our opinion closing the window for further rate cuts in Sweden
- Activity indicators in Sweden such as PMIs are still pointing towards a strong Swedish economy
- SEK appreciated 3.5% in February vs EUR
- Repo lines are getting a scare resource partly due to increased position taking from the HF community and security lending
- Both Norwegian and Swedish covered bonds ended February with marginally gains of 1bp for 5y bonds, while shorter Norwegian bond outperformed more and Swedish ditto the opposite
- Still elevated volatility of Norwegian and Swedish swaps vs EUR. SEK 5y swap underperformed EUR in the 5y area with 17bp while NOK rates only underperformed with 5 bp, that way outperforming SEK rates by 10+ bp
